

# Assessment of Potential Lake Sturgeon Habitat Availability in Northern Lake Michigan Tributaries: Applications to the Restoration Process

Dan J. Daugherty and Trent M. Sutton  
Department of Forestry and Natural Resources  
Purdue University  
195 Marsteller St.  
West Lafayette, IN 47907

# Project background

- Historic/present status
- Factors
  - Overexploitation
  - Impediments to migration
  - Physical habitat alteration
  - Water-quality degradation
- Increased public awareness, value, appreciation
  - Improved water quality
  - Highly-restricted harvest
- Some stock recovery

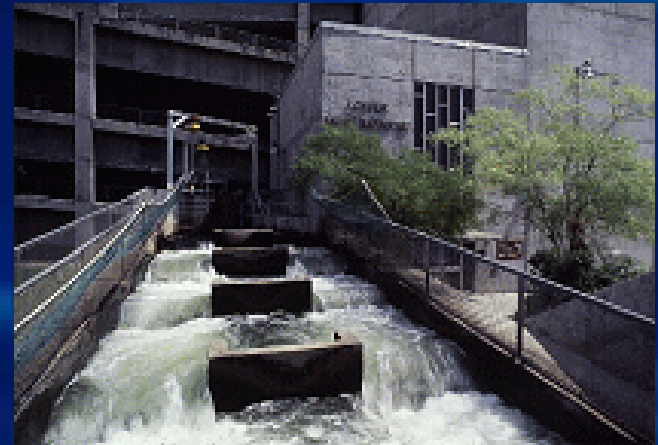

# Project background

- Remaining impediments to recovery
  - Physical habitat alteration
    - Alteration of flow regimes (dams)
    - Land-use practices
    - Erosion/sedimentation
  - Impediments to migration
    - Dams
      - Block access to historic spawning sites
      - Decrease habitat availability
- Relatively permanent, physical changes

# Project background

- Remediation
  - Rehabilitation of habitats
  - Provide access (fish passage)
  - Removal of barriers
- Current problems
  - Costly processes
  - Limited information exists
    - Where potentially effective?
    - Potential benefit?
    - Which systems?

# Project background

- Needs:
  - Information on existing habitats
    - Quantification of habitat types
    - Spatial configuration
    - Current accessibility
  - Implementation of restoration strategies
  - Prioritization of systems

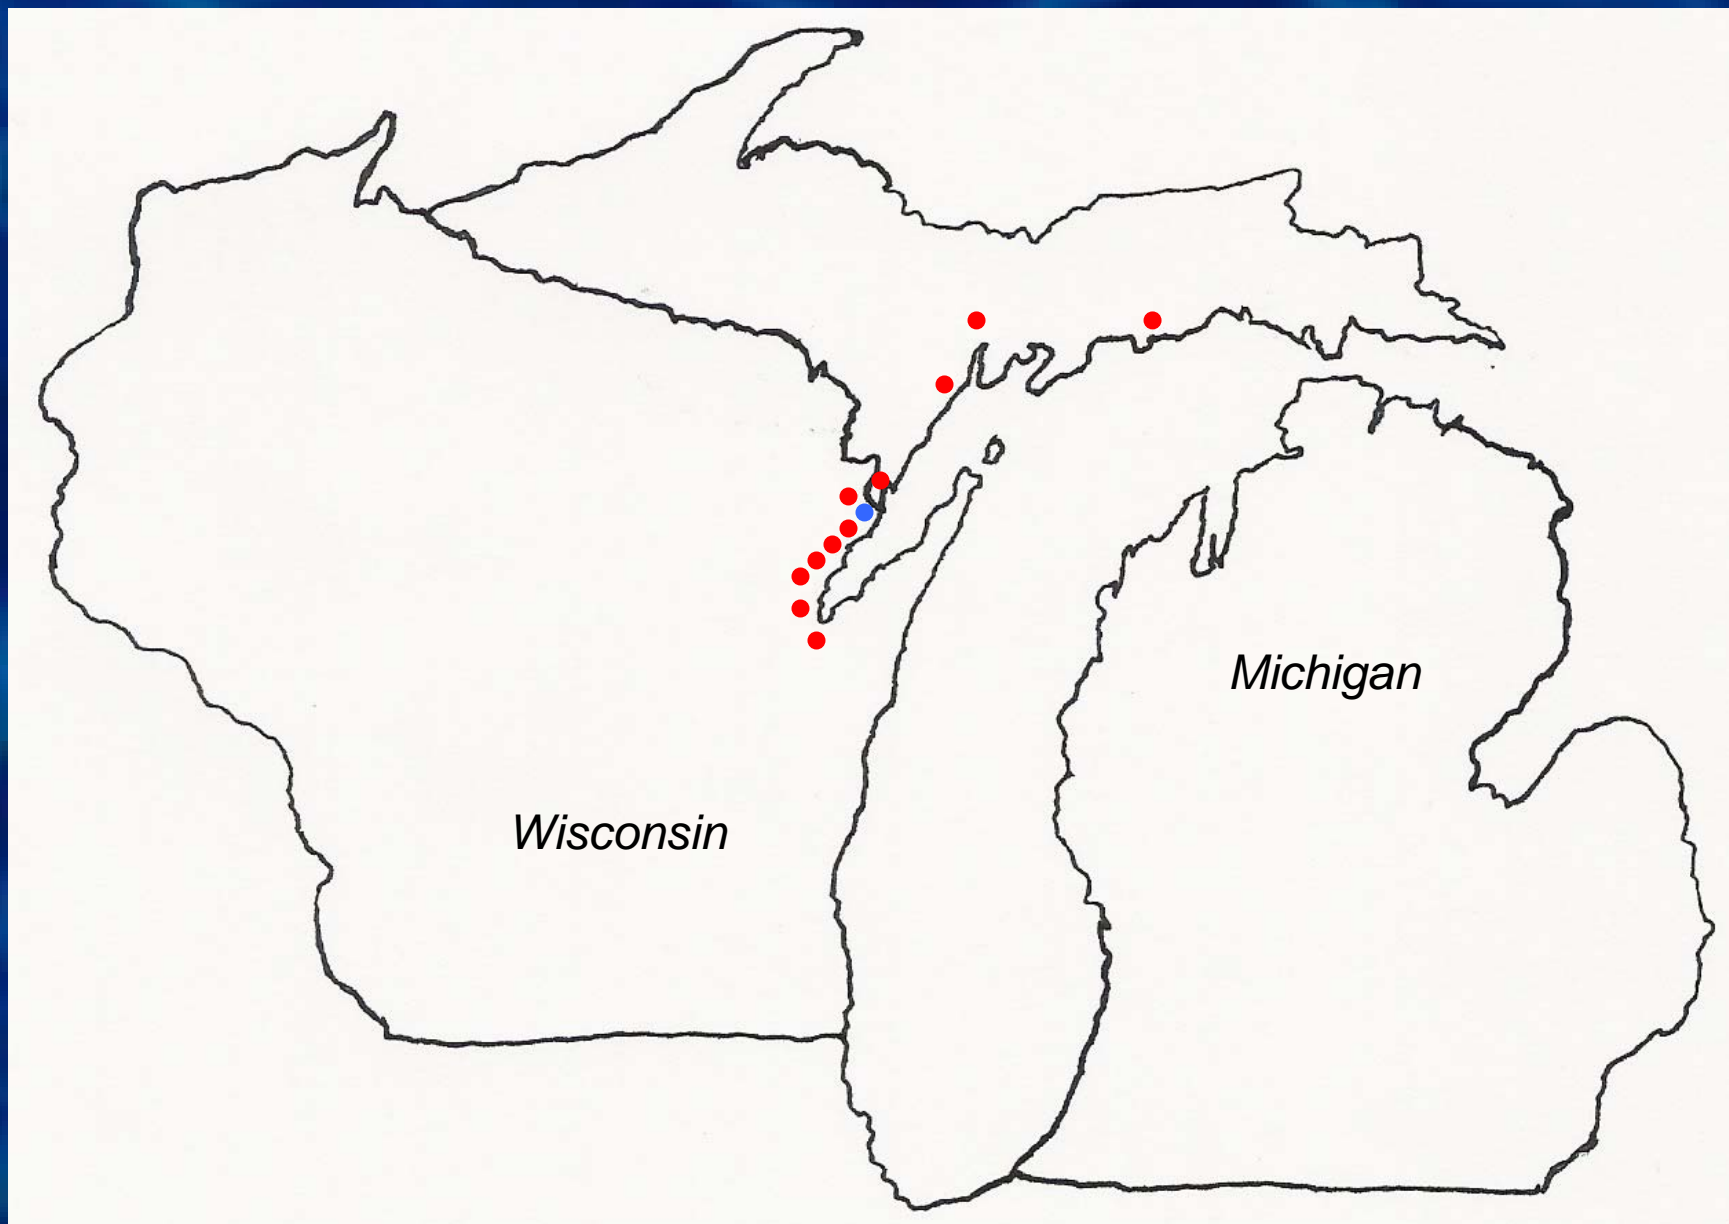

# Project objectives

- Assess/quantify riverine habitats
  - Egg/larval
  - Juvenile
  - Spawning/staging adult
- Development of digital maps
  - Geo-referenced
  - Spatial relationships
- Develop a habitat-based decision tool
  - Determination of appropriate restoration strategies
  - Prioritization of systems

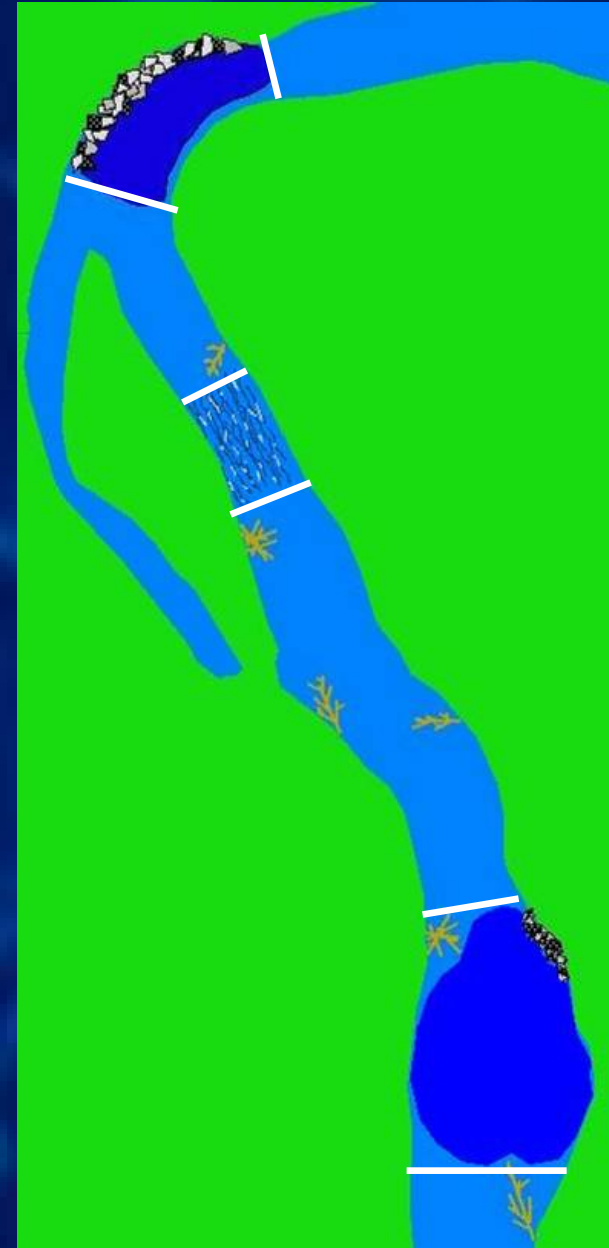

# Methodology

- Northern Lake Michigan systems:
  - Manistique
  - Fox
  - Ford
  - Menominee
  - Peshtigo
  - Oconto
  - Suamico
  - L. Suamico
  - Duck Creek
  - Fox
- Sampled to historic, natural migration barriers

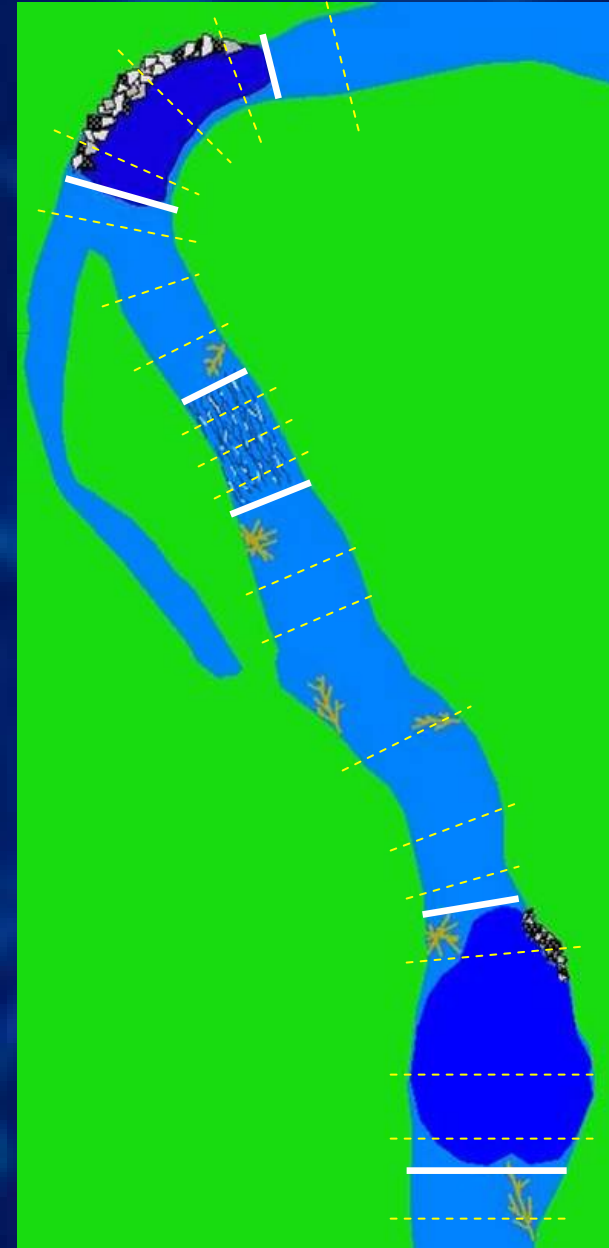

# Methodology

- Stratified, random sampling
  - Run, riffle, pool habitat types
  - Randomly spaced transects
- Point-samples
  - Left, middle, right channel
  - Substrate composition
  - Water depth
  - Flow rate (bottom)
  - Georeferenced (GPS)

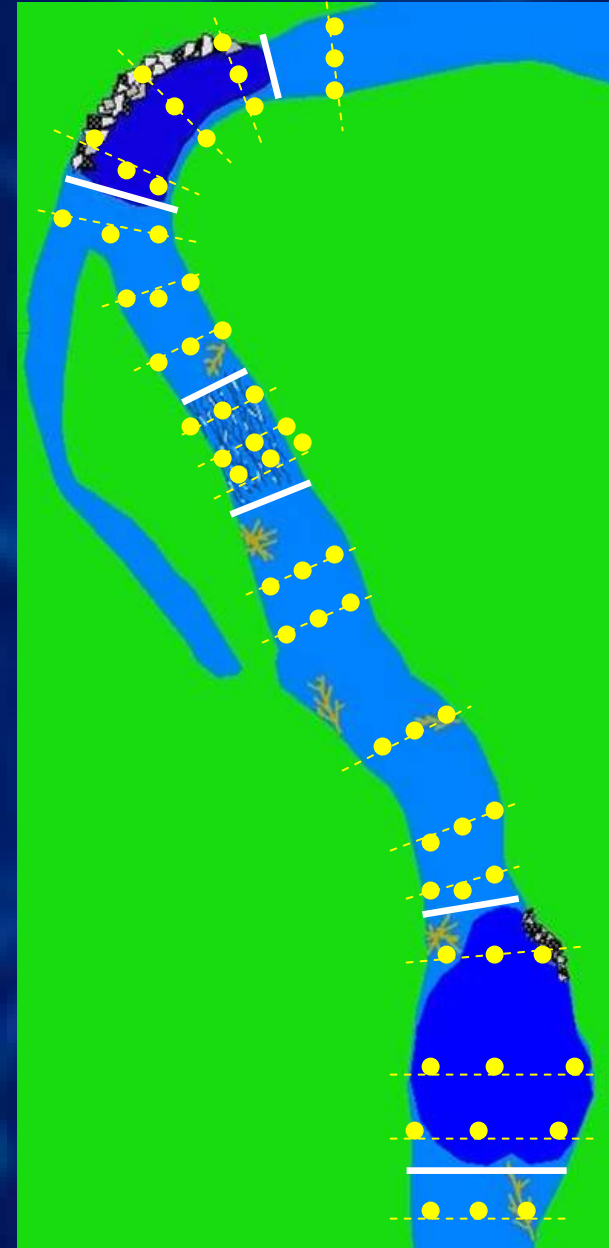

# Methodology

- Stratified, random sampling
  - Run, riffle, pool habitat types
  - Randomly spaced transects
- Point-samples
  - Left, middle, right channel
  - Substrate composition
  - Water depth
  - Flow rate (bottom)
  - Georeferenced (GPS)

# Methodology

- Stratified, random sampling
  - Run, riffle, pool habitat types
  - Randomly spaced transects
- Point-samples
  - Left, middle, right channel
  - Substrate composition
  - Water depth
  - Flow rate (bottom)
  - Georeferenced (GPS)

# Methodology

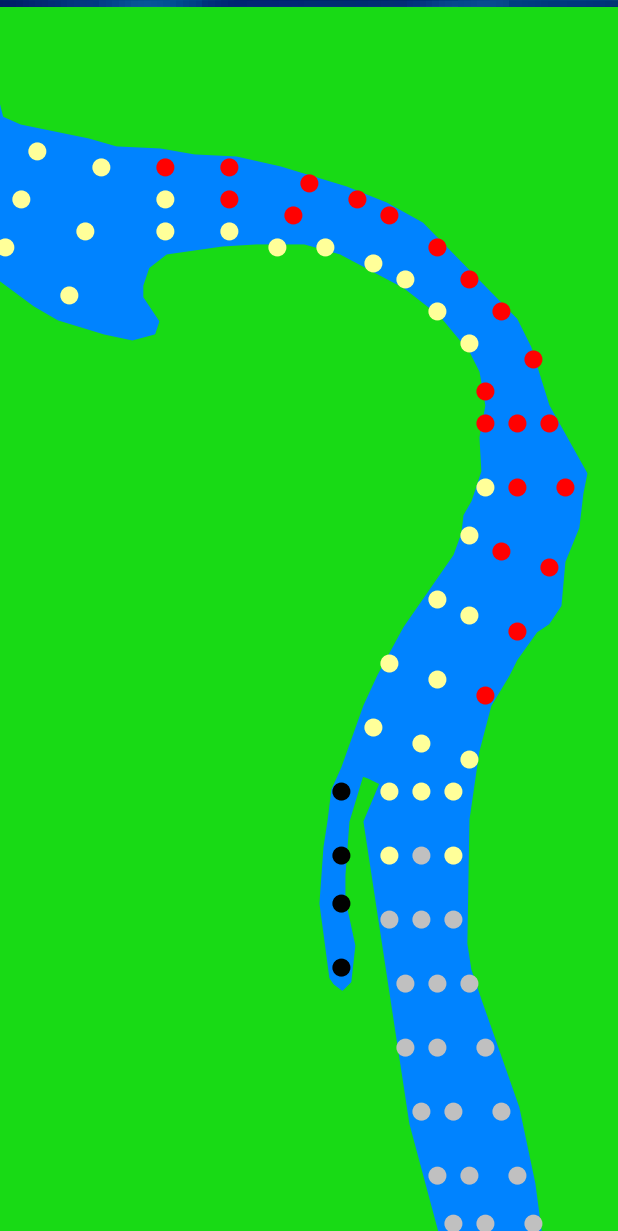

- Additional data considerations
  - Estimation of spring spawning/staging habitat variables
    - Hydrologic discharge/flow relationships
    - Generation of additional seasonal data
- Seasonal temperature and flow models

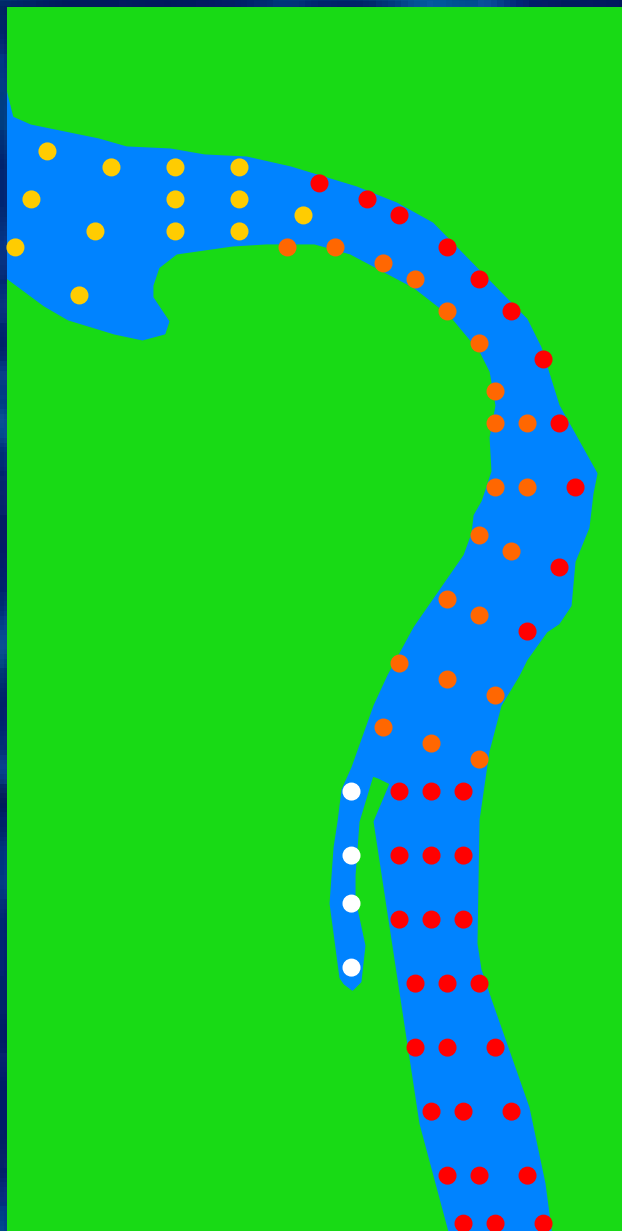

# Data analyses

- Spatial analyses – ArcView/ArcGIS®
  - Import coordinates and point-sample data
  - Spatial analyst extension
  - Interpolate variables
  - Create of grids and reclassify data
  - Spatial analyst - map calculator
    - Determine habitat availability
      - Known habitat-use characteristics
      - Each life-history stage

# Map Calculator

# Map Calculator

- Provides estimated feature coverage based on user-specified criteria
- Alter criteria for various life stages and repeat analyses
- Remains geo-referenced

# Management benefits

- Realization of enhancement/rehabilitation
- Incorporates all lifestages
- Allows for prioritization of systems
  - Cost-effectiveness
  - Approximation of effort/cost
- Provides framework
  - Behavioral advances
  - Biological advances

# Management benefits

- Development of decision tool
  - Applicable to other systems
